Product-minded engineer with two years building and shipping climate software at the intersection of research, product, and engineering. I lead products from discovery through delivery, work directly with customers, translating messy real-world problems into tools people rely on.

EXPERIENCE

Product Analyst | Boundless Impact Research & Analytics

September 2025 - Present

- **Led day-to-day development** of a O-to-I Python-based Life Cycle Assessment modeling platform now used by real customers, building prototypes, contributing to the core model, and coordinating across research, engineering, and management.
- **Partnered directly** with customers and leadership across discovery, prototyping, and feature prioritization to define the roadmap and drive iterative product releases.
- **Built** reusable template models that cut custom model build time from weeks to days, and contributed to Next.js frontend features including new data exports and visualizations based on user feedback.
- **Designed** a validation workflow enforcing data quality standards, doubling intern review throughput and eliminating database ingestion failures.

Research/Data Associate | Boundless Impact Research & Analytics

August 2024 - August 2025

- **Designed** a PostgreSQL database from scratch and migrated 8,000+ Environmental KPIs from spreadsheets; live within 4 months, now scaled to 30,000+ entries.
- **Built** Retool dashboards that let the research team query, filter, and export KPI data directly, turning a complex backend into a self-serve internal tool.

Software Engineer | Surge AI

January 2023 - May 2024

- Evaluated LLM-generated outputs across Python, data analysis, and natural language tasks against alignment guidelines, contributing to RLHF training data quality.

Software Engineering Intern | Ai Trillium Inc

June 2022 - August 2022

- Developed POSIX bash scripts to automate GitHub operations across nested repositories, reducing manual overhead.

PROJECTS

U-Net CNN for Image Reconstruction (Research Project)

- **Developed** a U-Net CNN for image reconstruction from indirect measurements in computational imaging systems.

Alternative Recycling Cornell Team Lead (University Project)

- **Led** a 4-8 person engineering and UI/UX team building a React Native app, shipping social features including followers/following using Firebase Cloud Functions, reaching 500+ user signups.

Sky Clustering (Academic Project)

- **Built** and compared K-means and a CNN to classify fisheye sky images by cloud cover for solar energy output optimization (Sky Clustering), achieving 77% accuracy.

EDUCATION

B.S. Computer Science | Cornell University, Ithaca, New York

August 2020 - August 2024

PRODUCT & TECHNICAL SKILLS

- **Product:** Discovery & user research, roadmapping, prioritization, prototyping, cross-functional leadership, customer & stakeholder management, data-informed decisions, go-to-market support
- **Technical:** Python, SQL, PostgreSQL, JavaScript, Next.js, React, Retool, Docker, data pipelines & ETL, QA/QC automation, ML/AI, AI-assisted development
- **Certificates:** Climate Change AI Summer School, SQL/PostgreSQL
- **Languages:** Farsi (bilingual)
